Employees

### **Board Meeting Efficiency Achieved with Discussion System**

The Canadian Association for Professional Employees (CAPE) is a Canadian public service union with almost 10,000 multi-lingual members.

With plans to build a new boardroom they recognized the need for an audio system that could offer a solution for language interpretation and meeting protocol.

The installation of a CDS 4000 Discussion System with DM 4410 P microphones brought the solution they needed. The speakers in the microphone units allow everyone to hear when someone is speaking.

The illuminated red ring on the microphone and operation modes such as push to talk or request to speak make it easy to create protocol in the meetings.

The loudspeaker is automatically switched off when the microphone is activated to prevent acoustic feedback.

The CDS 4000 Discussion System is delivers high quality audio and ensures an efficient and productive meeting.

CAPE Boardroom

Flush Mounted DM 4410 P Microphone Unit

### **CDS 4000 Discussion System Features:**

- Ideal choice for rental companies, panel discussions, school board and PTA meetings.
- Excellent audio quality.
- Portable or flush mount microphone options.
- Control via PC (SW 4010), a hardware panel (MC 4000) or 3rd party control device (AMX/Crestron) with optional card.
- System expansion to 1,000 microphone units.
- Daisy chain install with robust DB15 connector.
- Microphone operation modes such as push to talk, first-in-first-out, or request to speak.
- Three microphone stem lengths.
- Customized options.
