

Language Interpretation

With the world becoming more and more international, the need for reliable and precise language interpretation equipment is greater than ever. Language interpretation has been a key factor in facilitating communication among different cultural and linguistic groups, thereby contributing to the establishment of the modern global economy. Providing language interpretation delivers a very important message: that the complete involvement of each person is highly valued and essential to the success of your event.

When the subtlety of meaning can be lost in as much as a tone of voice, clear sound is vitally important. Listen products deliver the clarity, the precision, and the reliability absolutely necessary in a world where every word can mean so much. Whether giving a tour for visiting dignitaries, training international employees, or providing dialog in performing arts, Listen's wireless audio products provide the clarity to hear subtle expressions of tone and inflection.

Interpretation equipment for:

- House of worship services
- School/education settings
- Business or civic meetings
- Recreational tours
- Employee training
- International conventions
- Performing arts
- Medical / Dental facilities
- Law enforcement proceedings
- Government / Civic events
- . . . and many more!

Listen's wireless audio devices feature exceptional sound quality and ease-of-use

Use a Listen System for Several Applications...

Simultaneous Interpretation

Simultaneous interpretation is a process that allows people to communicate directly across language and cultural boundaries using specialized technology and the use of interpreters who are able to listen to one language while speaking simultaneously in another. The interpreter uses a transmitter to provide the interpretation to your guests by way of a headset. The interpretation is broadcast via a wireless system to the users who listen on small receivers with earphones. The receivers are multi-channel so the users can select the channel that corresponds to the language they wish to hear.

Interpreter Booth or Station

The interpreters are isolated so they do not disturb the other interpreters or the audience. They can sit in another room or a special soundproof isolation booth - generally one for each language being interpreted - while simultaneously interpreting into a microphone. Listen's Stationary Transmitter would be used along with other equipment (stationary transmitters have a range of up to 3,000 feet or 915 meters).

Whisper Interpretation

While in the same room or a nearby area with an audio feed, the interpreter whispers into a microphone while your guests listen on personal receivers from anywhere within range of the transmitter (up to 150 feet or 46 meters). This type of interpretation is ideal for community service groups (PTA meetings, for example) and short meetings where maximum flexibility is required.

Portable Interpretation Settings

Small events (such as board meetings or worship services) will often not have an installed interpretation system. Other times your guests and interpreters are on the move (such as facility tours). Listen's Portable Transmitters broadcast the same high quality audio for guests, and can be easily stored with personal receivers in charging/carrying cases.

Why Listen Technologies Corporation?

Focus on interpretation, not your equipment

High quality, hassle free equipment is vital to providing quality interpretation. An interpreter cannot be distracted by their equipment!

Guest friendly

Each guest wears a radio-like receiver with an earphone to listen to the interpretation at a volume that is personally comfortable.

Advanced audio quality

With the highest quality audio in its class, your guests will enjoy the professional-looking and pleasant sounding equipment.

Programmability

By programming units to display only the channels being used, you don't have to keep track of which receivers are set for which languages. Instead, patrons simply and easily scroll through the languages offered.

Easy to manage

Store and recharge up to 16 Listen receivers and a portable transmitter in one case! The system couldn't be easier to manage.

Multiple simultaneous interpretations

Whether interpreting one or multiple languages, Listen systems offer field-tunable units for patrons. And there is no limit to the number of receivers that can be used with a single transmitter.

Customize a system to fit your needs!

Each Listen system can be customized to accommodate your requirements, regardless of group size.

Advanced battery technology eliminates hassles

Use the same batteries over and over! Rechargeable Nickel Metal Hydride (NiMH) batteries last ten times longer than typical NiCAD rechargeable batteries and have no memory effect issues.

Sample Listen Systems for Language Interpretation

7-Person Language Interpretation System

Includes a portable transmitter with microphone and carrying case for easy storage

The Listen 7-Person Language Interpretation System (LS-06-072 or LS-06-216) incorporates a portable transmitter and behind-the-head microphone to broadcast to individual headset receivers or stationary receivers. This system also includes a carrying case for easy storage and transportation of your system. Call for a quote on a system specific to your needs.

15-Person Language Interpretation System - Advanced

Includes a portable transmitter with microphone, programmable receivers, NiMH batteries and charging case for the ultimate in manageability.

The Listen 15-Person Language Interpretation System - Advanced (LS-08-072 or LS-08-216) is similar to the 7 person system, but features LR-500 Programmable Display Receivers, advanced NiMH rechargeable batteries and a charging case. Great for language interpretation providers or rental organizations that want to offer guests receivers programmed to display only the channels being used.

Listen Accessories Add Value and Versatility to Your System

Listen's noise canceling microphone (LA-270)

When looking for unobtrusive microphone placement, but need the microphone close to your mouth the noise canceling microphone is great in extremely loud environments.

- Designed to cancel ambient noise
- Directional microphone picks up audio directly in front of the mic only
- Great for high noise environments
- Fits on the back of your head under hair
- The transmitter antenna is built in to this microphone's cord

Listen's popular Ear Speaker Headset (LA-164)

- Provides exceptional audio clarity
- Can be used with a hearing aid
- Doesn't completely block out other sounds
- Can be cleaned with alcohol
- Doesn't mess up hair
