Digital Conferencing System Ideal for International Conferences

Golf is the most rapidly developing sport in the country of Kazakhstan. The development began in 1996, when President Nursultan Nazarbayev encouraged the opening of a nine-hole golf club at the Alatau Health Resort complex in the Zailyskiy Alatau foothills near Almaty. The club proved to be so popular that expansion to an 18-hole championship course was completed in 2003, and the club was renamed the Nurtau Golf Club.

The construction of the elite golf club was finished in 2006 and now hosts the annual Kazakhstan Open.

In the same period the adjoining conference hall was equipped to hold international conferences and business forums. The DCS 6000 Digital Conferencing System was selected for its excellent sound quality and functions such as stand-alone "plug and play" or with software for extensive control, voting, polling, meeting agenda, video display and web streaming.

With up to 32 channels for language interpretation the Nurtau Golf Club can easily accommodate international clients.

Microphone operation modes such as voice activation, push to talk, first-in-first-out or request to speak bring protocol and control to meetings.

Nurtau can be confident in hosting meetings where sensitive matters are discussed. Audio encryption is available for high security applications.

The DCS 6000 Digital Conferencing System can be controlled via a 3rd party device such as AMX/Crestron.

Nurtau Golf Club Conference Hall

The conference hall is equipped with DCS 6000 Delegate Unit w/Dual Channel Selectors for Pluggable Mic-DM 6090 P units. The DM 6090 P is a fully digital, portable delegate unit perfectly suited for permanent meeting rooms or discussion style meetings with language interpretation. The unit features a built-in loudspeaker, a 3 pin XLR connector for pluggable gooseneck microphone, and two (2) channel selectors with three (3) letter language code.

The pluggable gooseneck microphone is available in three sizes, 14.2, 19.7, and 24.8 in. allowing for custom options for the setting. A proprietary dual rubber band suspension isolates it acoustically and mechanically from the rest of the microphone, eliminating all mechanical noises.

The DCS 6000 Digital Conferencing Systems' flexibility, excellent sound quality and many updated software features make it ideal for hosting international conferences and business forums.
