

# INTRODUCING iDSP

*For Listening Experiences That Matter*

Positive experiences are important, especially when it comes to listening to the things we love. Listen Technologies makes products that help people hear what they love in places where it can be difficult to hear.

iDSP is a new generation of personal listening products from Listen Technologies. When creating iDSP, Listen Technologies considered every aspect of how it would be used.

## EXPERIENCES: THEY MATTER

- iDSP can be used in various places where it's difficult to hear, like: theaters, lecture halls, concert venues, houses of worship, and more
- The dispensing and care process has been completely streamlined making it easy for places to get iDSP to their customers
- iDSP features an integrated neck loop/lanyard that sends signals directly to telecoil users' hearing aids or cochlear implants

## SOUND: IT MATTERS

- iDSP's unique audio processor adjusts in different environments to deliver better sound
- iDSP receivers have 20 dB less background hiss than any other listening device

## SIZE: IT MATTERS

- iDSP is the smallest device of its kind making it easier to wear
- It is easier for places to dispense, store, and maintain, because iDSP is so small

## THE ENVIRONMENT: IT MATTERS

- The charging tray and carrying case allow iDSP products to charge while they're being stored
- iDSP uses advanced battery technology like a smartphone, eliminating the hassle and cost of hazardous alkaline batteries
