LA-122 Universal Antenna Kit (72 and 216 MHz)
Dear Valued Customer,

Thank you for choosing Listen! All of us at Listen are dedicated to providing you with the highest quality products available. We take great pride in their outstanding performance because we care that you are completely satisfied. That’s why we independently certify them to the highest quality standards and back them with a limited lifetime guarantee. We stand ready to answer any questions you might have during installation or in the operation of our products. Should you experience any problems whatsoever with your Listen products, we are ready to help you in any way we can with prompt, efficient customer care. Because at Listen, it’s all about you! And should you have any comments on how we might improve our products or our service, we’re here to listen.

Here’s how to reach us:
+1.801.233.8992
+1.800.330.0891 North America
+1.801.233.8995 fax
support@listentech.com
www.listentech.com

Thank you and enjoy your listening experience!

Best regards,
Russell Gentner and the Listen Team

• In the few instances where repairs were needed, 99% of all clients indicated that they were happy with repair turn-around-times and 85% of the time, clients were without their product for less than 10 days!

• Overall client satisfaction of working with Listen was rated 4.8 out of 5.

• “Please continue with your excellent attitude toward customer satisfaction. You guys are great!”

• “I’ve never had such good service from any company. Keep up the good work!”

• “You stand behind your product wonderfully.”

LA-122 Package Contents

LA-122 Contents

- Wall/Electrical Box Mounting Plate
- Mounting Bracket
- Antenna Module and 25 ft. (7.6 m) RG58 coaxial cable with BNC Connectors
- Telescoping antennas (2 for both 72 and 216 MHz)
- Flexible antennas (2 for both 72 and 216 MHz)
- Ground Plane and Shorting Plate
- Mounting Hardware:
  (4) #6-32 Machine Screws - used to mount to a single or dual gang duplex box
  (4) #8-32 Machine Screws - used to mount to a square or hex junction or light box
  (4) #8 Sheet Metal Screws - used to mount to metal or wood, or for use with dry anchors
  (4) Dry Anchors - used to mount to drywall, concrete, plaster, brick, or masonry
  (2) Hex Kep Nuts (#10-32) and one (1) Fiber Washer - used for mounting flexible antennas to the Antenna Module, and for grounding purposes

Listen Part Number

LA-122 Universal Remote Antenna

Optional Accessories

LA-127 RG58 BNC Cable Connector
LA-128 RG8 BNC Cable Connector
LA-112 RG58 Coaxial Cable
LA-113 RG8 Low Loss Coaxial Cable
LA-390 RG8/50 Ohm Low Loss Preassembled Cable
LA-391 RG58/50 Ohm Preassembled Cable

Mounting Options

- Wall Mount (to your electrical box)
- Direct Wall Mount
- Ceiling Mount
- In-Wall or In-Ceiling Mount
- Mast Mount

Use With:

LT-800-072 Stationary Transmitter
LT-800-216 Stationary Transmitter
LT-803-072 Stationary 3-Channel FM Transmitter (72 MHz)
LR-100-072 Stationary Receiver/Power Amplifier
LR-100-216 Stationary Receiver/Power Amplifier
LR-600-072 Wireless FM Receiver/Speaker (72MHz)
LR-600-216 Wireless FM Receiver/Speaker (216MHz)
LA-122 Specifications

Architectural Specifications

The Universal Antenna Kit shall be capable of operating from 72.0 to 76.0 MHz with a center frequency of 73.5 MHz and from 216.0 to 217.0 MHz with a center frequency of 216.5 MHz. The kit shall include the necessary mounting hardware to mount the antenna on a single or dual electrical box, directly on a wall, on a ceiling electrical box or on a flat surface. The antenna shall have a BNC connector and the kit shall come with 25 ft. (7.6 m) of RG58 coax with BNC connectors. The kit shall include rigid and flexible antenna radials. The Listen LA-122 Universal Antenna Kit is specified.

Specifications are subject to change without notification.
Important Things to Note Before Starting Your Installation

Coaxial Cable

If you plan to use your own coaxial cable instead of the provided cable, you must use cable and connectors rated at 50 ohms. Although cable used for cable TV installations looks similar to this cable, it won’t work with your Listen system.

If you need to run cable over a greater length than 50 feet for 216 MHz applications or greater than 100 feet for 72 MHz applications, we recommend that you use RG-8 cable rather than RG-58. It is a lower loss cable, meaning that more of your signal will reach the antenna.

Long cable runs can result in signal degradation due to “loss” characteristics of the cable. At 72 MHz, there is a loss of 2 dB per 100 feet of cable and at 216 MHz, there is a loss of 5 dB per 100 feet of cable. (A 3dB loss means half of your power has been lost.) However, it is better to suffer coaxial power loss than to try to shoot your signal through obstacles! Obstacles, especially metal, can create drop-outs or reflections of your signal that will result in poor listening conditions.

Before Starting Assembly of Your Antenna

Please carefully compare the contents of your kit with the list found on page 2 of this manual. If any items are missing or damaged, please contact Listen Technologies. If items were damaged in shipment, contact your carrier immediately and retain all packaging for inspection by your carrier. Listen is not responsible for shipping damage.

Setup Instructions

Important Things to Note Before Starting

Antenna Orientation

The antenna’s pattern is hemispherical, meaning that it has an “active” side and a ground side. The active side directs the signal toward the receivers, so it is essential that the active side be oriented toward the area where the receivers will be used. The Antenna Module’s ground side has the word “GROUND” molded into the plastic.

See Diagram A. If it is necessary to locate an antenna low on a wall, the ground side should face down. If you are mounting a monopole antenna in a ceiling or high on a wall, the ground side should face up. It may be necessary to move the ground side of the antenna mount around in order to accomplish this.

To move the ground side of the module, simply remove the four nuts, reverse the module so that the ground side is facing the bracket, then re-attach the nuts. Be careful to not detach any wires if the module opens while it is not secured to the bracket.

Diagram A. Antenna coverage patterns. In Scenario 1, the antenna is mounted low in the facility. The GROUND side of the antenna (marked on the module) should face down. In Scenario 2, the antenna is mounted high in the facility. The GROUND side of the antenna should face up.
Important Things to Note Before Starting

Selecting an Antenna Location

The location and configuration of your antenna mount will determine the quality of your signal; therefore, there are some important factors to consider.

• Where will the receivers be located? Ideally, the antenna will be centrally positioned above that area.

• Where will the transmitter or stationary receiver/power amplifier be located? We recommend that it be located no more than 25 feet (7.6 meters) from the antenna.

• Are there any metal obstructions in the area? Ideally, there will be no metal between the antenna and the receivers. Also, try to avoid mounting the antenna in a location where nearby metal would be in parallel with the antenna -- this degrades the signal.

• Will the antenna be mounted outdoors? Antennas work well outdoors, but if possible, try to place the antenna where it will not receive too much exposure to moisture or dirt. Covering exposed connections with petroleum jelly or silicone gel will extend the life of the antenna.

Choosing the Type of Antenna to Use

Several types of antennas are included in this kit. You will only use one of them. How do you select the best antenna?

First, what is your operating frequency -- 72 MHz or 216 MHz? This eliminates half of the antennas since you can only use an antenna that will work for your frequency range.

Note: Remember, the LONGER antennas work on the lower frequency of 72 MHz and the SHORTER antennas work at 216 MHz.

Next, do you have any space restrictions? The rigid dipole antenna (the one with the two extendable arms) provides the best signal, but only if you can fully extend the sections of the antenna. If you can’t fully extend the rigid dipole, you will need to go with either the flexible dipole or the monopole antenna. We recommend using a dipole antenna whenever possible.

If you need to mount your antenna on top of an equipment rack, you will need to use the monopole antenna.

For mounting in a ceiling or in a wall, or taking up the least amount of space along an outside edge of a wall, the flexible dipole antenna is a good choice. Remember, though, that you need to extend the sections of this “floppy” antenna as far apart from each other as possible.
Dipole Antenna Mounting Options

Mount to an Electrical Box in a Wall

See Diagram B at right

The antenna may be mounted to a single or dual gang duplex box, or to a square or hexagonal junction box.

Attach the kit’s Mounting Plate to the electrical box (see photo, right). The cover plate has a number of holes and slots to accommodate a wide variety of electrical boxes. Next, secure the Mounting Bracket to the plate and connect your antenna as noted in the following pages.

Mount Directly to a Wall

See Diagram C at right

We recommend using the Mounting Plate to make for a sturdier installation, however, it is not necessary to do so. If you use the Mounting Plate, you will need to provide two shallow clearance gaps in the wall to allow for the two protrusions in the Mounting Plate.

Use appropriate anchors to secure the Mounting Plate to the wall (hollow wall anchors are provided in this kit), then secure the Mounting Bracket to the plate. If you are not using the Mounting Plate, use appropriate wall anchors to mount the Mounting Bracket directly to the wall.

Diagram B. The Electrical Box Mount uses the Mounting Plate and Mounting Bracket as shown above.

Diagram C. A direct Wall Mount should use the Mounting Plate for added strength, but it is not required for proper antenna operation.
Dipole Antenna Mounting Options

Mounting Inside a Wall or Ceiling

See Diagrams D and E

The antenna may be hidden inside a wall or ceiling. IMPORTANT: Do not install the antenna inside a metal wall or ceiling, as this would obstruct the signal.

You will use a flexible dipole (the floppy wires) in this configuration. Select the correct wires for your configuration (72 MHz or 216 MHz). Connect one antenna wire to the ground side of the Antenna Module using one of the Hex Kep nuts provided. Connect the other wire to the active side using the other Hex Kep nut, as noted in Diagram D below. If you are using a Mounting Bracket, you will need to install the provided fiber washer between the antenna and mounting bracket.

Secure the mounting bracket to a beam, making sure the active (non grounded) side of the antenna is directed toward the area where the receivers will be located (see Diagram E below). Then, secure the ends of the antenna to beams using wood screws or the provided sheet metal screws. Try to make the wires as straight as possible, and make sure they extend in opposite directions.

Diagram E. A flexible dipole can be mounted in your ceiling or wall as shown here. Although the Mounting Bracket is not shown here, it would be used to secure the Antenna Module to a beam.

Diagram D. Flexible Dipole connection to the Antenna Module.
Dipole Antenna Mounting Options

Mounting to a Mast of Conduit

The antenna may be mounted to a mast, pole or section of vertical conduit. A mast made of non-conductive material works best; however, if you must use a metal mast, be sure to orient the antenna mount so the mast is not between the antenna and the designated receiving area.

The Mounting Plate is not required, but will provide a stronger mount for the antenna. Secure two commercially available conduit clamps (not included in this kit) to the mast, then attach the Mounting Plate to the clamps and connect the Mounting Bracket to the Mounting Plate, as shown in the photo at right.

Installation of a dipole antenna on a vertical mast with the Mounting Plate. Note that the antenna is installed at the TOP of the mast.

Diagram F. Mast Mount without the Mounting Plate.

IMPORTANT (see Diagram F at left): When installing an antenna on a metal mast, make sure the mast does not extend above the antenna module. If you are mounting the antenna in a high location (such as a stadium), the active element should be at the bottom. If mounted low, the active element will be at the top of the installation. Make sure the antenna is mounted in such a way that the mast will not interfere with the signal.
Connecting the Dipole Antenna

You have two choices of antenna with the dipole option: the rigid dipole, which has the two extendable arms, or the flexible dipole, which has the “floppy” wires with securing rings at the ends. Rigid dipole pieces screw onto the connectors at the top and bottom of the Antenna Module. Flexible dipole wires are secured using Hex Kep nuts and a fiber washer as indicated on page 7.

If you don’t have enough room to fully extend the ground arm of a rigid dipole, you can use half of a rigid dipole for the active side and half of a flexible dipole for the ground side. Although the dipole works best when the wires are fully extended straight, satisfactory operation can still be obtained when you slightly bend the ground wire (not the active one!) to fit around a ceiling or floor corner.

Connect the coaxial cable (either the cable provided in the kit or your own) to the Antenna Module’s BNC connector. Connect the other end to the LT-800 transmitter or the LR-100 Receiver/Power Amplifier, depending on which device you are using.

If you supply your own cable, you MUST use 50 ohm coaxial cable and connectors. Do not use cable made for cable TV installations: it is rated at 75 ohms and will not work in this application.
**Monopole Antenna Mounting Options**

**Mount to a Grounded Electrical Box, Ceiling or Floor**

A monopole (single element) antenna may be mounted to a grounded light box or junction box in a ceiling or floor using the Mounting Plate and Mounting Bracket.

BEFORE STARTING, reverse the Antenna Module on the Mounting Bracket, then install the Hex Kep nut on the ground post (see Diagram G at right). The combination of the Mounting Bracket, nut and your grounded electrical box provides the required ground for the antenna.

If you do not have access to a grounded box, you will need to attach a flexible antenna element to the ground side of the Antenna Module (see Diagram I). Be sure to use the correct length element (longer wire for 72 MHz, shorter one for 216 MHz). Connect the wire underneath the shorting nut and run it up into the ceiling.

---

**Diagram G. Reversing the Antenna Module on the Mounting Bracket**

**Diagram H. Ceiling mounted monopole with a grounded box.**

**Diagram I. Ceiling mounted monopole with a flexible antenna attached to provide a ground. This installation creates a dipole antenna, which has better performance than a monopole. The Shorting Plate is not used in this configuration.**
Monopole Antenna Mounting Options

Mount to a Metal Surface Using the Ground Plane and Shorting Plate

See Diagram J

It is often convenient to place an antenna on top of a metal equipment rack. In order for the antenna to function properly, it must be secured to the equipment rack using the Grounding Plate and Grounding Base.

The Mounting Bracket is not used in this configuration. Remove the four nuts and screws from the Antenna Module and carefully remove it from the bracket. With a lockwasher still over each screw, put the screws through the Ground Plane. Make sure the ground side of the Antenna Module (as indicated on the module) is oriented AWAY from the Grounding Plane. Then, slide the Shorting Plate over the ground side (bottom) of the module. Replace the four nuts on the bottom of the assembly. Then, place a Hex Kep nut on the center ground post and tighten.

Secure the Ground Plane to your metal rack using sheet metal screws.

Attach the proper Monopole antenna element to the Antenna Module. Systems on 72 MHz will use the LONGER antenna; systems on 216 MHz will use the SHORTER one.

Connect the supplied coaxial cable between the Antenna Module and the stationary transmitter or receiver. If you use your own coaxial cable, be sure to use cable and connectors rated at 50 ohms.
Monopole Antenna Mounting Options

Mounting a Monopole Antenna to a Metal Beam or Metal Ceiling

See Diagram K

Follow the instructions for mounting to a metal equipment rack, orienting the antenna downward rather than upward.

Mounting a Monopole Antenna to a Non-Conductive Surface

See Diagram L

Follow the instructions for mounting to a metal equipment rack, however, there are two additional steps:

1. Connect a length of flexible antenna (appropriate to the frequency you are using) on the ground post of the antenna module under the Hex Kep nut. You will NOT use the shorting plate in this configuration.

2. Drill a hole in the non-conductive surface and run the flexible antenna through the hole. This antenna will provide the ground for your antenna since the non-conductive surface cannot supply a ground.

If you are mounting the monopole upside down on a ceiling, run the flexible length inside the ceiling and stretch it out as far as possible from the monopole antenna element. Secure the antenna through the connection lug at the end of the wire.

## Compliance Notice

<table>
<thead>
<tr>
<th>Compliance Notice</th>
</tr>
</thead>
<tbody>
<tr>
<td>This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) These devices may not cause harmful interference, and (2) these devices must accept any interference received, including interference that may cause undesirable operation.</td>
</tr>
</tbody>
</table>

**Listen’s LT-800 Transmitter (216 MHz only)**

Listen’s LT-800 transmitter is authorized by rule under the Low Power Radio Service (47 C.F.R. Part 95) and must not cause harmful interference to TV reception or United States Navy SPASUR installations. You do not need an FCC license to operate these transmitters. These transmitters may only be used to provide: auditory assistance to persons with disabilities, persons who require language translation, or persons in educational settings; health care services to the ill; law enforcement tracking services under agreement with a law enforcement agency; or automated maritime telecommunications system (AMTS) network control communications. Two-way voice communications and all other types of uses not mentioned above are expressly prohibited.

This device must be installed by a trained audio professional or certified dealer of Listen. The user can’t make any modifications to the unit without expressed written consent of Listen Technologies Corporation. Any modifications made will void the FCC compliance, Listen warranty and the users authority to operate Listen’s equipment.

## FCC Statement

<table>
<thead>
<tr>
<th>FCC Statement</th>
</tr>
</thead>
<tbody>
<tr>
<td>This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:</td>
</tr>
<tr>
<td>- Reorient or relocate the receiving antenna.</td>
</tr>
<tr>
<td>- Increase the separation between the equipment and receiver.</td>
</tr>
<tr>
<td>- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.</td>
</tr>
<tr>
<td>- Consult the dealer or an experienced radio/TV technician for help.</td>
</tr>
</tbody>
</table>

This equipment has been certified to comply with the limits for a class B computing device, pursuant to FCC and IC Rules. In order to maintain compliance with FCC and IC regulations, shielded cables must be used with this equipment. Operation with non-approved equipment or unshielded cables is likely to result in interference to radio and TV reception. The user is cautioned that changes and modifications made to the equipment without the approval of manufacturer could void the user’s authority to operate this equipment.
Warranty & Contacting Listen

**Warranty**

Listen Technologies Corporation (Listen) warrants its transmitters and receivers (LT-82, LT-700, LT-800, LR-100, LR-42, LR-44, LR-300, LR-400, LR-500, LR-600) to be free from defects in workmanship and material under normal use and conditions for the useful lifetime of the product from date of purchase.

Listen warrants its Stationary IR Radiators (LA-140) to be free from defects in workmanship and material under normal use and conditions for three years from the date of purchase.

Listen warrants its Noise Canceling Microphone (LA-270) to be free from defects in workmanship and material under normal use and conditions for one year from date of purchase.

All other products and accessories are warranted for 90 days from date of purchase.

This warranty is only available to the original end purchaser of the product and cannot be transferred. Warranty is only valid if warranty card has been returned within 90 days of purchase. This warranty is void if damage occurred because of misuse or if the product has been repaired or modified by anyone other than a factory authorized service technician. Warranty does not cover normal wear and tear on the product or any other physical damage unless the damage was the result of a manufacturing defect. Listen is not liable for consequential damages due to any failure of equipment to perform as intended. Listen shall bear no responsibility or obligation with respect to the manner of use of any equipment sold by it. Listen specifically disclaims and negates any warranty of merchantability or fitness of use of such equipment including, without limitation, any warranty that the use of such equipment for any purpose will comply with applicable laws and regulations. The terms of the warranty are governed by the laws of the state of Utah.

In the first ninety days after purchase, any defective product will be replaced with a new unit. After 90 days, Listen will, at its own discretion either repair or replace transmitters and receivers with a new unit or a unit of similar type and condition. Product that is not covered under warranty shall be repaired or replaced with a unit of similar type and condition based on a flat fee. Contact Listen for details.

This limited warranty, prices and the specifications of products are subject to change without notice.

**Contacting Listen**

If technical service is needed, please contact Listen. Pre-authorization is required before returning Listen products. If products were damaged in shipment, please contact the carrier, then contact Listen for replacement or repair requirements payable by the carrier.

Listen’s corporate headquarters are located in Bluffdale, Utah U.S.A. and are open Monday through Friday, 8am to 5pm Mountain Time.
