WAP (Wireless Access Point)

Wireless router combines many features
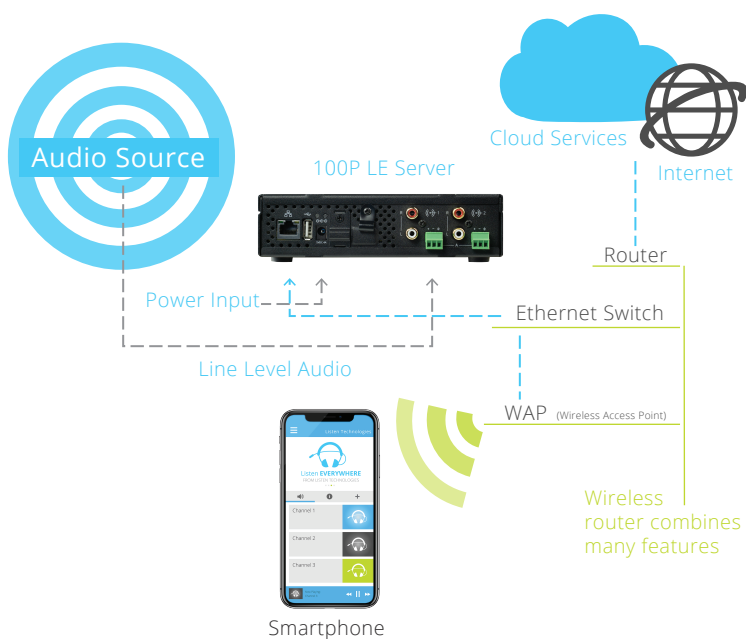

Smartphone

TROUBLESHOOTING TIP

Experiencing a lack of signal? Check IP addresses on the Venue Server and smartphones to ensure they are on the same network.

CLOUD SERVER SETUP (optional)

Cloud Services offers in-app marketing features including banner ads & promotional videos, web-based remote setup & maintenance, and advanced customization. Create an account with Cloud Services by visiting the Listen Everywhere registration page: **www.listen-tech.com/listen-everywhere/registration**

You will receive an email with login credentials to **services.listenev-erywhere.com** once attended to by a technical services specialist during operating hours.

Serial number looks like: LEL6-2345-43RF-TEW9

1. **Connect Audio**
   Connect the audio source(s) to the LE server via the terminal block connectors on the rear panel. LW-100P units may use the enclosed RCA connection cable provided.
   Note: The input connectors accept line-level audio inputs. The RCA connectors on the LW-100P units are unbalanced sum-to-mono inputs. If stereo is required, connect the audio source(s) to the (1)L and (2)R connectors and then select, "stereo", in the Cloud Service (see Cloud Service Setup).

2. **Network Connection & Power**
   Connect the LE server to your local area network (LAN) via the Ethernet port on the server rear panel, then plug in the power cable. A flashing blue power LED indicates the server is booting up. Once a network connection has been established, the blue power LED will turn solid. The enclosed Cat 6 cable may be used to connect the LE server to the network router or switch. The LE server and smartphones must be on the same network.
   Quick Tip: 2.4 GHz bands tend to have higher traffic; 5 GHz or dual-band access points are recommended in high-traffic areas

3. **Download App**
   Download the Listen EVERYWHERE app. Join the Wi-Fi network associated with the Venue Server (i.e., on the same LAN). Launch the app, select channel to stream, enjoy! Available on Google Play & the Apple App Stores.

LISTENIR SETUP   Setting up Transmitter

LT-84 Transmitter

Audio Source

Power Input

Power Switch
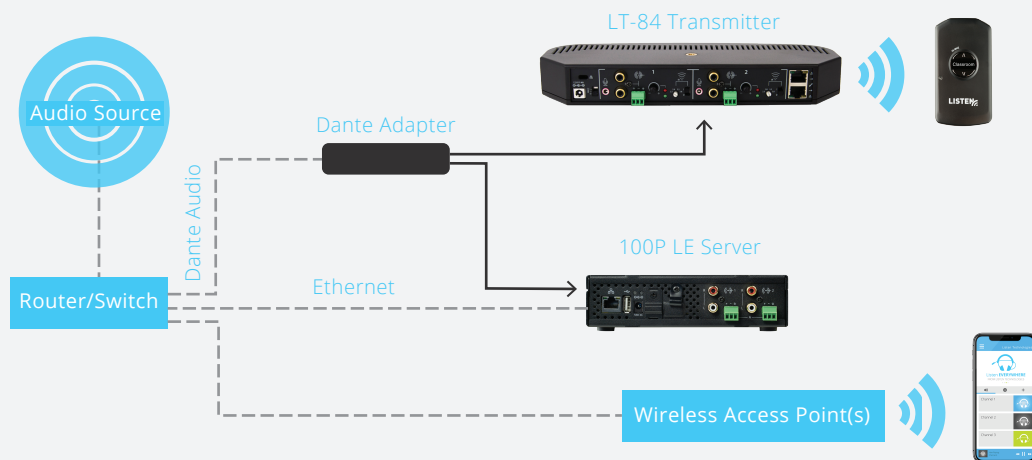

1. **Connect Power**
   Plug in the power cable & flip the "power switch" to the desired position.

2. **Connect Audio**
   Connect audio from sound system with an RCA or balanced terminal block to input 1. Adjust level control to be in the green level with occasional red peaks.

OR   **Connect Dante Audio Adapter with Audio (optional)**
   If you are using the Dante Audio Adapter, connect the RJ45 network cable into the Dante Adapter & plug one of the XLR outputs to input 1 on the LT-84 & the other XLR output into the 100P LE server.

Setting up iDSP Receivers

Power

Adjust Volume

Classroom

Micro-USB
Charging Port

1. **Power**
   To turn on the iDSP receiver, hold the button for one second.

2. **Plug in Headset**

3. **Adjust Volume**
   To desired level.

   The receiver is charged with a micro USB charging cable provided with the system. When connected to the charger, a blinking light indicates it is being charged & a solid light indicates a full charge.
