

Welcome to the Passenger Experience Revolution

ENGAGE YOUR GUESTS

with an incredible experience, amazingly automated

Navilution® Evo is a complete GPS multimedia entertainment solution designed to provide universal access to passenger entertainment while giving sightseeing operators unprecedented dynamic passenger information and analytics. Deliver the best tour experience to your guests with engaging, entertaining tours that topple language barriers and open all-new markets.

Incredible Experiences, Amazingly Automated

Navilution Evo offers tour operators the first completely automated commentary solution so you know you'll never again deliver poor, boring narration and inconsistent tours.

The market-leading quality and reliability of our solutions means you can focus more on your business growth, and less on your drivers. And, when you choose to partner with Listen Technologies at the cutting edge of tour technology, you'll increase ridership faster and more predictably, gain higher customer satisfaction ratings and remove operational barriers.

Smartphone Integration

Our hardwired Driver Control Panel is optional. Connect any smartphone or tablet with a browser to our Navilution solution for an instant wireless Driver Control Panel.

The Most Powerful Seat-Back Unit They'll be Too Enthralled to Notice

Successful tour operators know that providing engaging multi-language tours offers enormous benefits over the competition, including increased ridership, predictable bookings, increased safety and the simplified HR process of hiring drivers and not storytellers.

We believe that every passenger should enjoy the same tour experience, which is why we're excited to offer our industry-first Navilution line, designed for accessibility. Including raised icons and braille interface, our patented design helps orientate passengers with vision loss to the controls of our seat-back unit. And, for the hearing impaired, you can provide both sign language tours and video-generated text, triggered by our pinpoint accurate GPS.

Introducing Personalization with More Info

Today's visitors want choice, value, control and convenience. More Info breaks the mold on channel-up, channel-down and volume settings located on every seat-back interface by adding a new passenger experience opportunity.

Complete Control in the Driver's Hands

Designed alongside driver and captain feedback, Navilution improves safety and reduces distraction through simple, two-finger touches for drivers to access Safety, Emergency and Filler commentary (off-route audio).

Cloud Computing. Always Up to Date Software

Amazing business agility, more responsiveness and support and less risk because we host Cortex in the cloud. You'll never have to worry about an update again.

Unique Video Extensibility

Enhanced attention and emotion-grabbing video experiences with new opportunities for promotional and hearing-impaired communications.

Up to 99 Languages & Topics in a Single Route

Offer passengers a unique tour experience in hundreds of combinations of language and topics with no additional overhead through 99 dedicated channels.

Pain-Free System Updates

Upload tours and updates by inserting a USB memory stick, no computer needed.

Support for PA Systems

Experience astonishing time savings when working with PA systems thanks to the simple, single-touch assignment of language channels.

Gain Business Analytics

Each EVO system comes equipped with class-exclusive TrueTime Passenger Analytics, allowing you to collect, analyze and share passenger information.

Leading GPS Technology

The latest in GPS receiver technology, this high sensitivity, highly accurate, 12 parallel-channel, WAAS enabled GPS receiver comes with an integrated magnetic base and optional window mount.
