

ListenTALK

Enabling Greater Inclusion of Hearing-Impaired Students in the Classroom

Frijsenborg

Frijsenborg: Frijsenborg Boarding School, a secondary boarding school in Denmark, enrolls approximately 100 students annually; generally, 20 to 25 percent of students are hearing impaired. Frijsenborg specializes in accommodating students with hearing disabilities and including them among students with normal hearing.

PROBLEM

Frijsenborg needed to upgrade its amplifying systems for hearing-impaired students and sought a technical solution that would also facilitate hearing-impaired students' interactions with the teacher and rest of the classroom.

SOLUTION

Using ListenTALK transceivers, one unit is used as a teacher's microphone with an attached headset. The other units are for students – both hearing-impaired and typical-hearing students – to use as senders, receivers or both. The combined amplification of sound directly to the ears of hearing-impaired students with ListenTALK and classroom sound field system speakers enables hearing-impaired students to clearly hear everything that is being communicated in the classroom and engage in discussion with teachers and peers.

RESULT

- Enabled hearing-impaired students to hear clearly
- Inspired confidence among teachers
- Facilitated greater collaboration and engagement

"ListenTALK is a simple and very effective system...that helps our hearing-impaired students hear what is being said in the classroom."

**RASMUS BEJDER, TEACHER,
FRIJSENBORG BOARDING

LISTEN
TECHNOLOGIES

ListenTALK

Students and teachers who tested the ListenTALK Education system were very happy with it and confident in their decision to implement the system at Frijsenborg.
