

Assistive Listening Solutions

Find the best technology for assistive listening.

What is an Assistive Listening System (ALS)?

A wireless system including transmitters and receivers, to improve the experience for a person who is hard of hearing, sending the audio direct to headphones, hearing aid, or cochlear implant, without amplifying ambient noise.

Required Components

The Americans with Disabilities Act (ADA) requires all public spaces where audio is integral to the use of the space must provide an assistive listening system to accommodate those with hearing loss.

Transmitter

Receivers
(based on seating capacity)

Neck loops
(based on seating capacity)

Signage

Questions to Ask Your Customers

- What are you currently using for Assistive Listening?
- What is the seating capacity of the room(s) or space(s)?
- Do you have a preferred technology?
- Are you looking at something installed or portable?
- Does the audio need to be private or secure?
- Does the customer want to be able to utilize Smartphones or BYOD?
