

# ListenTALK

Courts use ListenTALK for effective and clear communication.

In the United States, the federal court system is made up of 94 district courts, 13 circuit courts, and one Supreme court. State courts are typically made up of circuit or district courts, then the courts of appeals, and a state's supreme court.

### Challenge

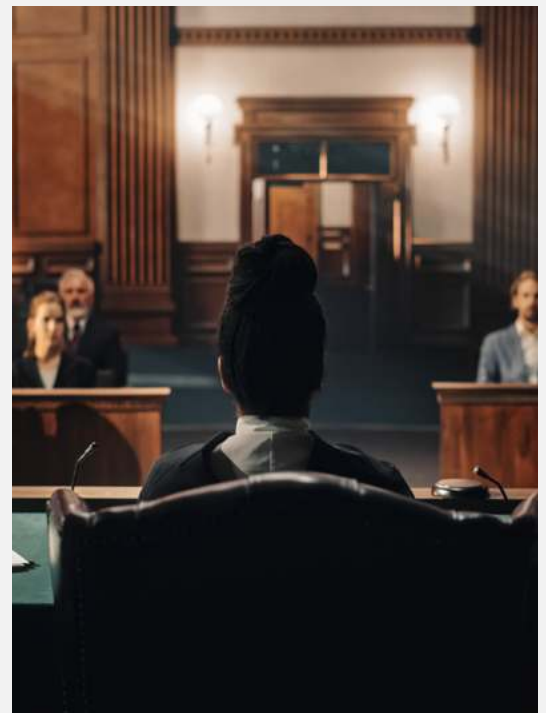

Language barriers, hearing loss, distance, and ambient room noise can make language intelligibility and clarity challenging. Effective and clear communication is essential to ensure everyone can hear and understand the important details that are shared during legal proceedings both inside and outside the courtroom.

### Solution

ListenTALK ensures that attorneys, clients, the judge, and members of the jury can effectively hear and communicate when needed, without the risk of interrupting important proceedings. The two-way communication system is encrypted for security to ensure no one else can listen into confidential conversations. The system features a sleek transceiver (combination transmitter/receiver) which connects to transmit room audio for assistive listening, can be worn by the court interpreter for language translation, or can be used for private attorney-client conversations.

Participants wear the transceiver on a lanyard and listen through a standard headset or earbuds. The system consists of transceivers, a docking station to charge and pair devices, lanyards to wear them and headsets.

*“ We had allocated resources to provide translators but needed the right technology to make the interpretation easier. We are very happy with the results of using ListenTALK for language interpretation; our meetings are more professional, efficient, and effective. ”*

**Court Interpreter**

## Result

ListenTALK helps attorneys and their clients hear and understand each other while participating in legal proceedings and can be used for assistive listening, interpretation, and to accommodate small group communication.

Devices are simple to set up and use.

- The entire system- including tray, headset, and device, can be sanitized and disinfected between uses.
- Hands-free: users wear the lightweight device on a lanyard.
- The system is compatible with any headsets or earbuds with a standard 3.5 mm jack.
- Transmits encrypted audio to paired devices within a 100-meter radius indoors (200-meter radius outside).

## Applications

Attorney-Client Communication

Language Interpretation

Side-Bar Conversations

Assistive Listening

## Products Used

- (1) LKS-1 ListenTALK Base-4 System
- (4) LA-452 ListenTALK Headset 2
- (1) LKR-11 ListenTALK Receiver Pro
- (1) LA-482 ListenTALK Docking Station 4
- (5) LA-444 ListenTALK Protective Case
- (1) LA-172 Small Sanitary Covers for Stereo Headphones

Optional: add LA-438 Advanced Neck Loop to support telecoil transmission for hearing aid and cochlear implant users.

**Because everyone deserves the same great listening experience.**
