

## European Adventist Youth Congress

# Listen EVERYWHERE

Youth Group uses Listen EVERYWHERE for Interpretation

Every five years, young people from all over Europe meet at the [European Adventist Youth Congress](#), the largest gathering of Adventist youth in Europe. The AYC22 event was held in Lahti, Finland, and welcomed over 2500 young people for the four-day conference.

### CHALLENGE

The event organizers intended to provide fully inclusive language interpretation for all attendees. The plenary sessions would be in English, and eleven additional languages would need to be interpreted for the 2500 attendees. Providing and managing large quantities of traditional RF systems would require a dedicated support team and a sizable equipment inventory.

### SOLUTION

[AUDIO PRO HEILBRONN Elektroakustik GmbH](#) provided the AYC22 conference with two [Listen EVERYWHERE LW-200P-08 eight-channel Wi-Fi audio servers](#) to broadcast the twelve live language channels throughout the venue. Attendees, participants, and staff used their personal smartphones to download the free Listen EVERYWHERE app, then simply selected their preferred language channel.

*“ Using Listen Technologies’ Listen EVERYWHERE audio over Wi-Fi solution, AYC attendees downloaded an app, brought headphones or earbuds, and selected their language for the general sessions. They sat wherever they wanted and didn’t have to worry about returning devices because they used their smartphones to access the interpreted audio. Attendees reported that they found the app to be intuitive and easy to use. ”*

## RESULT

The utilization of Listen EVERYWHERE at AYC22 allowed each attendee the use their personal smartphone to stream their preferred language audio, in turn listening through their personal wired earphones or Bluetooth® enabled earbuds or hearing aids. Each user was able to enjoy clear audio in a large venue environment.

The conference offered a venue-wide broadcast of multiple languages while avoiding the need for additional resources of lendable inventory and the necessary staff to maintain, track, and clean traditional receivers and listening transducers.
