

# ListenIR

## The Best Infrared Assistive Listening Solution

### Why ListenIR?

- Best-in-class sensitivity
- Easily expandable
- Superior coverage
- Crystal clear sound
- Discreet receiver
- Integrated neck loop
- Channel naming
- Inventory management
- OLED display
- Advanced rechargeable battery
- Secure audio

### Traditional Stethoscope Infrared Receiver

- Small IR signal sensor
- Prone to audio drops
- Obtrusive design
- Unsanitary
- Uncomfortable

### ListenIR iDSP Infrared Receiver

- Receives IR signal from anywhere on the unit
- 360° degree coverage
- Virtually no audio drops
- Sleek and discreet design
- Easy to sanitize

Add ListenIR iDSP receivers to **ANY** installed infrared system for an improved audio experience.

The iDSP receiver operates on four wideband channels:

Channel 1 (2.3 MHz) | Channel 2 (2.8 MHz)

Channel 3 (3.3 MHz) | Channel 4 (3.8 MHz)

### A Better Experience!

Neck loops help meet compliance and provide a better, personalized listening experience for people with hearing loss that use telecoil-enabled hearing aids and cochlear implants.

### Listening Options for Everyone!

ListenIR iDSP receivers have a standard 3.5 mm connector to offer your customers a personalized solution.

Neck Loops

Headphones

Earbuds

**ListenIR provides a superior listening experience.**
